(CCR), phenyllanine ammonia lyase (PAL), 4 commarate (CCR), phenyllanine ammonia lyase (CAL), 4 commarate (CAR), phenyllanine ammonia lyase (CAR), 4 commarate (CAR), 2 coniferol glucosyl transferase (CGT), coniferon beta-glucosidase (CBG), CC confect acid methyl transferase, caffeoyl CoA methyl transferase, CCC commerate COA ligase, cytochrome P450 LXLA, diphenol oxidase, flavanol CCC commerate COA ligase, cytochrome P450 LXLA, diphenol oxidase, flavanol CCC commerate COA ligase, flavanoid hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway. The CCC polynucleotides can be used for modulating lignin content, ignin CCC composition and the structure of a plant, especially eucalyptus and pine CCC species, and for modifying the activity of an enzyme involved in lignin CCC content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any CCC cryanism and for PCR amplification. The lignin content can be efficiently CCC modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAA68201 and AAB16341 to CCC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes isolated polynucleotides and proteins encoding and representing the enzymes cinnamate 4 hydroxylase (C4H), commarate 3 hydroxylase (C3H), phenolase (PNL), O-methyl transferase (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-COA reductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 184; 213pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents the cDNA sequence of a peroxidase P7X gene. The P7X gene is isolated from maize inbred line Mp307. Peroxidases reduce hydrogen peroxide or molecular oxygen in the presence of an electron donor. Plant peroxidases are involved in pathogen defence responses. DNA constructs or transcription casset comprising peroxidase P7X gene and its promoter are useful for providing nematode resistance in plants.

The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specificities of peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.

                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes isolated polynucleotides and proteins accommanded and representing the enzymes cinnamate 4-hydroxylase (C4H), Cc commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (CG), cinnamyl alcohol dehydrogenase (CAD), cinnamyl-coA reductase (CCC), cinnamyl alcohol dehydrogenase (CAD), cinnamyl-coA reductase (CCC), phenylalanine ammonia-lyase (PAD), 4-commarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC conferol glucosyl transferase, caffeoyl COA methyl transferase, CCC commerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol ccc glucosyl transferase, flavanoid hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway. The polynucleotides can be used for modulating lignin content, lignin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lignin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any condified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAA68201 and AAB16341 to AAA68201 and AAB16341 to content for protein sequences used in the content can be efficiently modified using the polynucleotides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the nucleotide sequence of a maize per5 cDNA clone encoding root preferential cattonic peroxidase (see AAW87893). The clone was isolated by screening maize root, stem, leaf, kernel and tassel RNA using probes (see AAV63718-19) based on tobacco peroxidase conserved domains. A probe generated from per5 cDNA was used to isolate the per5 gene (see AAV63717). Regulatory sequences of the per5 gene, including the promoter, introns and 3 untranslated region (3 UTR), argulated recombinant gene cassettes for controlling expression of recombinant gene sh selected tissue, especially the root, of transformed plants, particularly maize.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Local Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-10-047-825-4 (1-313) x ABN87249 (1-1295)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a nucleic acid (I) or its fragment CC encoding caffeoyl-CoA 3-O-methyltransferase (CCOAMT), cinnamyl alcohol CC dehydrogenase (CAD), caffeia acid O-methyltransferase (OMT), commanded acid O-methyltransferase (OMT), commanded acid O-methyltransferase (OMT), peroxidase (CER), caffeia acid O-methyltransferase (OMT), peroxidase (CER), celulase (CAH), cinnamoyl-CoA reductase (CCR), peroxidase (CER), celulase (CAH), cinnamoyl-CoA reductase (CCR), peroxidase (CER), celulase (CAH), ferulate-5-hydroxylase (F5H), phenylalanine CC ammonia lyase (FAL) from perennial CC ryegrass (Lolium perenne) or fescue species. (I), its nucleotide columnonial sequence information and/or single nucleotide polymorphisms is useful as sequence information and/or single nucleotide polymorphisms is useful as molecular genetic marker. (I) can be used for modifying lignin CC biosynthesis and/or cellulose degradation in a plant to manipulate cell CC walls. (I) or its fragments are useful for isolating cDNAs and genes cencoding homologous proteins from the same or other plant short. Short CC segments of (I) or its fragment are useful in amplifyation protocols CC applify longer nucleic acids or its fragments encoding homologous CC genes from DNA or RNA. (I) or its fragments are useful as molecular CC genes from DNA or RNA. (I) or its fragments are useful as molecular CC usefunical stress for quantitative trait loci (QTL) tagging, QTL mapping, CC mechanical stress tolerance, disease resistance, insect pest resistance, CC plant stature, leaf and stem colour. The present sequence represents a CC Lolium perenne (perennial ryegrass) nucleotide sequence from the present CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1295
                                                                                                                                                                                                      445

                                                                                                                                                                                                  밁
                                                                                                                                                                                                                          δÃ
                                                                                                                                                        US-08-811-094-23
                                                                   Sequence 23, Application US/08811094
Patent NO. 5869720
GENERAL INFORMATION:
APPLICANT: John, Maliyakal E.
TITLE OF INVENTION: TRANSGENIC COTTON PLANTS
TITLE OF INVENTION: PRODUCING HETEROLOGOUS PE
                                        NUMBER OF SEQUENCES: 2
